HACKTOBERFEST HACK DAY BENGALURU 2026

Sponsor Profile Dossier

DeepAgentLabs

Governing partner for the Best Open Source AI Project track

Building open tools for operating agentic AI

Observability, supervision, evaluation, reliability testing, and operational workflows for agent systems.

HOSTED BY

AWS Student Builder Group

at Atria Institute of Technology

01 Executive summary

A current snapshot for event organizers, mentors, and student contributors.

DeepAgentLabs is a community-led open-source ecosystem focused on the operational needs of agentic AI. Its tools help developers observe agent workflows, add runtime supervision, evaluate behavior, test failure modes, connect through MCP, and organize operational workflows.

For Hacktoberfest Hack Day Bengaluru 2026, DeepAgentLabs is sponsoring and governing the Best Open Source AI Project track. The goal is to help students build useful open-source AI projects and make meaningful contributions with mentor guidance.

~402K+	6	10+	4
PyPI downloads (live dashboard)	PyPI packages	Community contributors	Maintainers

Live package counts shown in the DeepAgentLabs dashboard (October 12, 2026)

PACKAGE	DOWNLOADS	PACKAGE	DOWNLOADS
AgenticLens	~129K	Agentic Sidecar	~28K
Deep Agentic Core MCP	~112K	AgenticOps Control Tower	~22K
Agentic Chaos	~96K	Agentic Evals	~15K

Approximate dashboard total: ~402K. Pepy data may be cached for up to 12 hours; PyPI totals can include automated and CI downloads.

Purpose and direction

Vision: make agentic AI systems more observable, reliable, governable, and production-ready through open, interoperable tools. DeepAgentLabs develops modular components teams can adopt individually and combine into an end-to-end workflow.

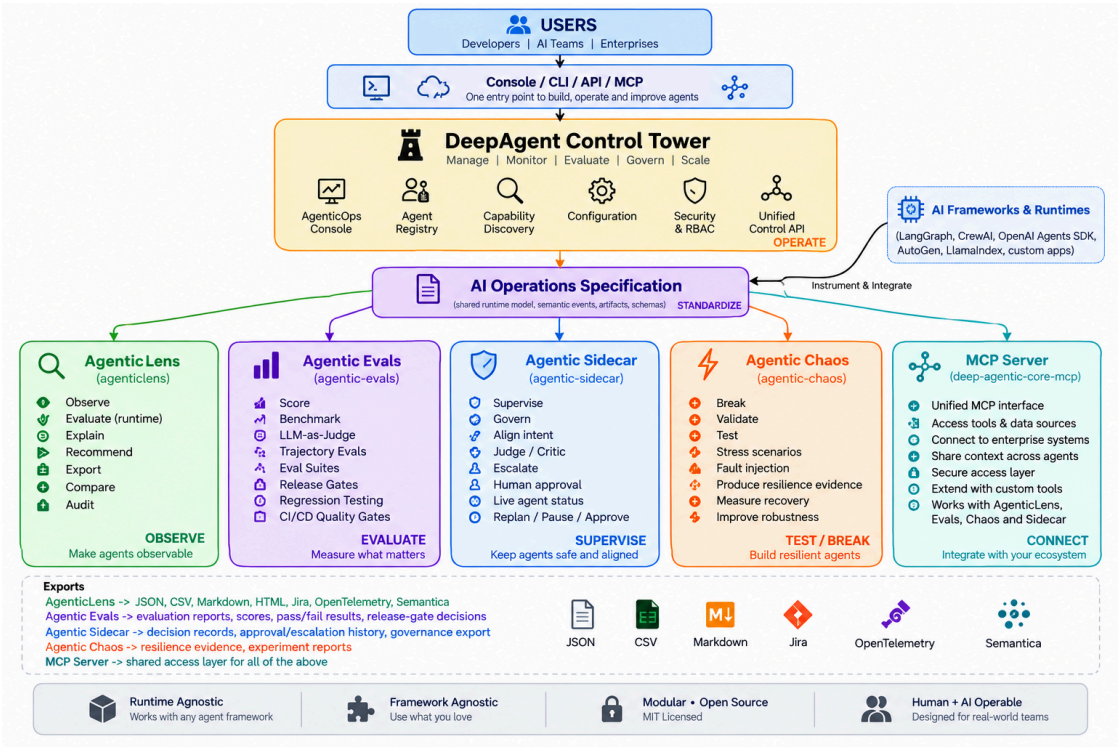

.

02 Ecosystem overview

Representative components and the operational role each one serves.

COMPONENT	FOCUS	EXAMPLE ROLE
AgenticLens	Agent observability	Tracks what your AI agent did, how much it cost, and how to make it better. (Shows what your AI agent is doing, step by step.)
Agentic-Sidecar	Runtime supervision	Use supervisory roles such as critic, judge, risk evaluator, policy advisor, and decision gate. (A helper that reviews the agent's decisions before it acts.)
Agentic-Evals	Evaluation	Assess agent outputs and workflow behavior against defined criteria and test scenarios. (Checks whether the agent's answers are good.)
Agentic-Chaos	Reliability testing	Exercise failure and resilience scenarios to understand agent behavior under stress. (Breaks things on purpose to see if the agent can cope.)
Deep-Agentic-Core-MCP	MCP connectivity	Connect agentic tooling and workflows through Model Context Protocol integrations.
AgenticOps Control Tower	Operations	Provide an operations-oriented view and control surface for managing the ecosystem. (One place to monitor and manage everything.)
AI Operations Spec	Interchange and replay	Represent captured operational flows in a structured format for review and repeatable testing.

Focus areas include observability, runtime supervision and governance, evaluation, reliability and failure testing, interoperability, and operational tooling. Each repository has its own scope, documentation, and contribution path.

USERS
Developers | AI Teams | Enterprises
Console / CLI / API / MCP
One entry point to build, operate and improve agents
DeepAgent Control Tower
Manage | Monitor | Evaluate | Govern | Scale

Fault injection
Produce resilience evidence
Measure recovery
Improve robustness
TEST / BREAK
Build resilient agents
MCP Server
(deep-agentic-core-mcp)
Unified MCP interface
Access tools & data sources
Connect to enterprise systems
Share context across agents
Secure access layer
Extend with custom tools
Works with AgenticLens, Evals, Chaos and Sidecar
CONNECT
Integrate with your ecosystem
Exports
AgenticLens -> JSON, CSV, Markdown, HTML, Jira, OpenTelemetry, Semantica
Agentic Evals -> evaluation reports, scores, pass/fail results, release-gate decisions
Agentic Sidecar -> decision records, approval/escalation history, governance export
Agentic Chaos -> resilience evidence, experiment reports
MCP Server -> shared access layer for all of the above
JSON
CSV
Markdown
Jira
OpenTelemetry
Semantica
Runtime Agnostic
Works with any agent framework
Framework Agnostic

03 Hack Day role and track

Best Open Source AI Project | Hacktoberfest Hack Day Bengaluru 2026

DeepAgentLabs will serve as sponsor and governing partner for this track, helping participants shape useful open-source AI projects and reviewing submissions against a shared rubric. Eligible work can be a new open-source AI project or a meaningful extension, integration, example, evaluation, policy pack, or operational feature.

Use any or all DeepAgentLabs tools to build.

CRITERION	WEIGHT	WHAT REVIEWERS LOOK FOR
Innovation and usefulness	30%	Originality and relevance to real developer or operational needs.
Technical implementation	25%	Sound architecture, code quality, packaging, integrations, and cloud-native practices where applicable.
Open-source practices	20%	Clear documentation, examples, tests, CI, license, issue/PR workflow, and contribution guidance.
Impact and adoption potential	15%	Reusability, community value, and potential to integrate with the DeepAgentLabs ecosystem.
Demo and presentation	10%	A clear demonstration and concise explanation of the problem, approach, and impact.

Example submission types

- Agentic AI tools, demonstrations, or integrations.
- Observability dashboards, evaluation suites, or workflow tests.
- Reliability scenarios, policy packs, or MCP connectors.
- Useful extensions to DeepAgentLabs projects, with clear documentation and a working demo.

> **Featured projects:** Projects that use DeepAgentLabs packages will be featured on the DeepAgentLabs website.

Projects can stand on their own as open-source work; ecosystem integration is one possible path, not a requirement.

04 Open contribution opportunities for students

> **DeepAgentLabs welcomes students of all skill levels**, including those with no prior open-source experience. Mentorship and onboarding will be provided.

Contribution areas

AREA	WHAT YOU CAN WORK ON
Python Development	Core SDKs, CLI tools, APIs
AI / Agentic AI	Agent workflows, tool use, evaluation
Cloud / Cloud-Native Engineering	Docker, Kubernetes, AWS integrations
Documentation	README improvements, tutorials, API docs
Integrations	Connecting DeepAgentLabs with LangChain, CrewAI, MCP servers, etc.
Research	Literature review, benchmarking, whitepapers
Technical Blogs	Writing how-to guides, architecture explainers
Examples, Scenarios & Use Cases	Building real-world demos
Community and Open-Source Activities	Issue triage, community support, event organization

Benefits for student contributors

- ✓ **Real-world open-source experience** on projects targeted for AAIF (Linux Foundation)
- ✓ **Visible GitHub contribution portfolio** to showcase to recruiters
- ✓ **Mentorship** from industry professionals and DeepAgentLabs maintainers
- ✓ **Contribution Certificates** recognizing work within the ecosystem
- ✓ **Hands-on exposure** to Agentic AI technologies, MLOps, and cloud-native engineering
- ✓ **Networking opportunities** with Microsoft User Groups, ACM SIGAI, and other AI communities
- ✓ **Early-career head start:** build industry connections, practical project experience, and a strong professional profile

Community and collaboration

DeepAgentLabs is actively expanding its contributor community. To support this, it has created dedicated channels for student onboarding.
